

New system release in March !

What are the new features in Sen2-Agri **version 1.8**?

• Steps towards a more **user-friendly web UI** to minimize the interactions with Linux environment :

- Added the possibility to **upload insitu and strata** data from the web interface
- Added the possibility to **delete a site**
- Added the possibility to **disable L8** when a site is created
- Disabling a site/season should now disable all activity for this site/season (Download, MACCS & Jobs)
- GUI Products tab has now the possibility **of filtering products** by site, season, tiles, product type or by specifying an interval
- Added the possibility to **Pause/Resume/Cancel** a job in the system overview
- Added the possibility to **delete a scheduled job** from the Dashboard
- The system version is now displayed on the GUI footer

New system release in March !

What are the new features in Sen2-Agri **version 1.8**?

- Steps towards a more **user-friendly web UI** to minimize the interactions with Linux environment.
- **New L3B processor for Sentinel-2 data**
 - Produces **LAI / fCOVER / fAPAR / NDVI**
 - Avoid quick saturation of LAI observed before
 - Up to now, it is only available for Sentinel-2 products
 - Old version still enabled by-default. Topic on FAQ will be added to show how to move to new version
- **Crop Mask without in situ data: CCI – Landcover map 2015 is now used instead of CCI – Landcover 2010**
- **Added the sen2agri-services application that is performing the following:**
 - Replaces the old downloaders
 - Insert a new database (**datasources**) that allows customization of sources (SciHub, AWS, /eodata storage, etc) for query and for download
 - Offers *RESTful services* for interrogating system to :
 - * enable/disable downloading for a site, for a certain satellite
 - * start or stop the downloads for a site/satellite
 - * retrieve or update the configuration of a datasource
 - * receive notifications from the system

Version 1.8
Release in the
coming days.
Stay tuned!

New system release in March !

What are the new features in Sen2-Agri version 1.8?

- Steps towards a more **user-friendly web UI** to minimize the interactions with Linux environment.
- New L3B processor for Sentinel-2 data
- Crop Mask without in situ data: CCI – Landcover map 2015 is now used instead of CCI – Landcover 2010
- Added the sen2agri-services application
- Added one new status in the `downloader_history` database specifying the products currently processed by MACCS. Step towards having this information displayed in the GUI in next version
