

- Planning stages for using Sen2-Agri – more will be known once Venus data distribution starts
- Combine Venus with S2 and L8 over Maricopa and either Eloy or Yuma sites (depending on Venus availability)
- Incorporate Sen2-Agri to help map crop type, LAI, and fractional cover for alfalfa, durum wheat , and cotton in Maricopa and Eloy areas; while lettuce, spinach, durum wheat are the prime crops for Yuma
- Joint work under a NASA-funded biophysical modelling project approved to continue. Possible synergy between project goals
